San Francisco District

### **Project Map**

### **WHITE SLOUGH, SECTION 205 VALLEJO, CALIFORNIA**

CONGRESSIONAL DISTRICT: 7<sup>th</sup> District, Rep. George Miller

STUDY DESCRIPTION: This study is an extension of the San Francisco Bay Shoreline Study (General Investigation), and is being conducted under Section 205, Flood Control Act of 1948 (PL 80-858). The study is addressing both tidal and fluvial flood protection for flood-prone areas adjacent to White Slough, a tributary of the Napa River that drains a portion of northwestern Vallejo.

FISCAL YEAR 03 BUDGET: \$0

POSSIBLE SOLUTIONS: While the area was formerly protected by a levee adjacent to the Napa River, such a solution is now unlikely due to the presence of wetlands between the Napa River and the Marine World Parkway (State Highway 37). The recommended plan consists of floodwalls along Austin Creek and the installation of a series of tide-activated gates and culverts which will act to control tidal flows into the Slough.

PRESENT STATUS: The Feasibility Cost Sharing Agreement (FCSA) was signed in November 1998 with the non-Federal sponsor, the Vallejo Sanitation and Flood Control District. The Feasibility Study is scheduled for completion in FY02 with a positive recommendation to initiate the Plans and Specifications (P&S) stage.

FUTURE EFFORTS: Fiscal year 2003 funds, if available, will be used to complete P&S and prepare for construction. Award of the contract to construct the recommended plan is scheduled for 2003, subject to availability of funds.
